The Increase of Capital Inflows in EMEs

Frame subtitles are optional. Use upper- or lowercase letters.

- Capital Inflows post-GFC: “Carry Trade”, QE, interest rates, and quick returns
- Country-specific factors.
- Plus Factors for Developing Nations: attractive financing for investment, diversify risks, promote inter-temporal trade, develop financial markets.
- Minus Factors for Developing Nations: high demand for local currency, currency appreciation, cause bubbles in assets, housing, stock markets.

The History of Capital Controls - From 'Cardinal Sin' to Policy Agenda

- Capital Controls: Measures taken by a government, central bank, or other regulatory body to limit the flow of foreign capital in or out of the domestic economy (i.e., taxes, tariffs, outright legislation, volume restrictions, market-based forces)

Capital Controls and the Asian Financial Crisis

- The mainstream view that capital controls were bad was challenged because of the following reasons:
- East Asian countries had yet to develop a financial and capital system with sufficient prudential safeguards;
- The 'Double Mismatch' of maturity and currency made them vulnerable to capital inadequacy and currency depreciation;
- Previous foreign capital inflows would exit the country rapidly (hot money).

IMF reverses its position on capital controls

Opening in Response to Foreign Pressures

- 1980s: Korea experiences rapid economic growth in the presence of capital controls.
- Late 1980s: Policy making for liberalization process begins in the face of US macroeconomic policies and pressure on Korea for improved market access for US financial service providers.
- 1994: Foreign Exchange System Reform Plan unveiled under foreign pressures for further financial regulation.
- 1995-1999: A series of multiyear financial sector policy plans promulgated, with Korea's 1996 accession to the OECD.

 - **Limitation of Non-Deliverable Forwards Markets**
 - Macro-Prudential Levy
- 4 Summary and Conclusions

Korea Limits Non-Deliverable Forwards Markets

- Non-Deliverable Forwards Markets (NDFs): a short-term, cash-settled currency forward between two counterparties.
- On the contracted settlement date, the profit or loss is adjusted between the two counterparties based on the difference between the contracted NDF rate and the prevailing spot FX rates on an agreed notional amount.
- 2004 - The South Korean Ministry of Finance and Economics (Mofe) introduced new regulations aimed at limiting activity in the non-deliverable forwards (NDF) market by onshore banks.
- The move is aimed at reducing the volatility in the Korean won exchange rates with other currencies.

- 3 Korea's Launch of Capital Controls
 - The Move for Capital Controls
 - Limitation of Non-Deliverable Forwards Markets
 - Macro-Prudential Levy
- 4 Summary and Conclusions

Korea Implements Macro-Prudential Levy

- The Partial Amendment Law to the Foreign Exchange Transactions Act was passed in the Korea National Assembly on April 5, 2011 and went into force from August 1, 2011.
- Ceilings on FX derivatives positions of all banks, a limit at 50% of their equity capital.
- Regulations on foreign currency bank loans (allowed for purchase of raw materials, FDI, repayment of debts, but limited use for domestic purposes)
- Prudential regulations for improving FX soundness of financial institutions (20 basis-point levy imposed on overseas debt maturing in less than one year)
- New policies under consideration (additional measures to discourage short-term borrowing abroad)

Summary and Conclusions

- Korea's policy direction and implementation (particularly in the G20 Seoul Summit) is not a drastic change; it is a step forward for macroprudential stability in the Korean economy in the aftermath of the GFC.
- The NDFs Limitation and Macro-Prudential Levy launched by the Korean government are in line with the global context of deploying capital controls.
- However, thus far, the actual effects of capital controls remain to be seen.
- As for policy recommendations, domestic efforts to strengthen financial monitoring and advisory system are strongly required in addition to efforts to control inflows from abroad.
